AS LISTED IN THE UL CERTIFICATION FOR THE UNITED STATES AND CANADA

.....

## SDHx AND SDHxT SERIES (SDHR(T), SDHI(T) AND SDHF(T)) CUSTOM DUCT HEATERS

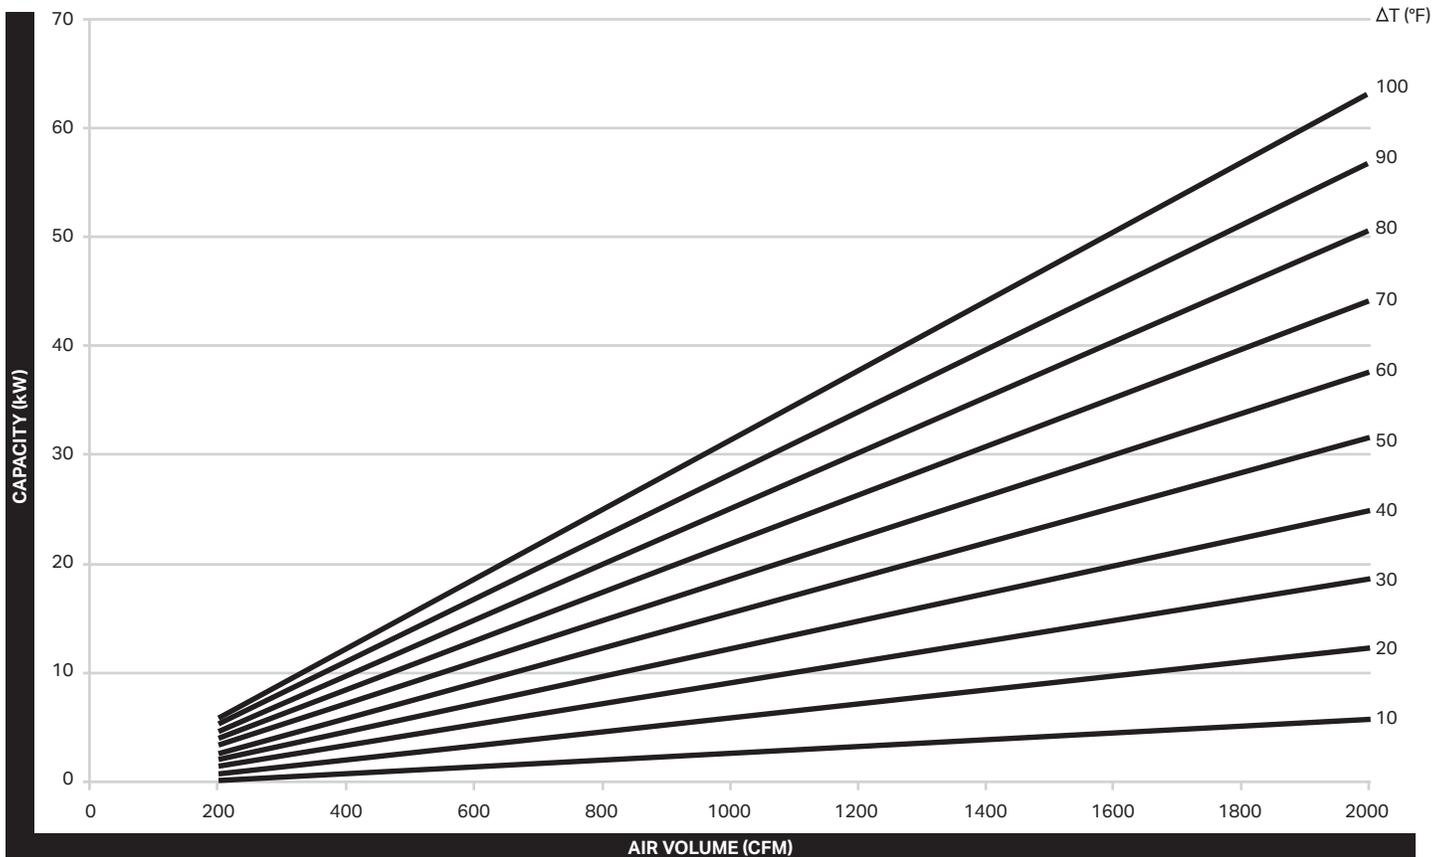

This unit  
complies with  
CSA and UL  
standards

# PRODUCT NUMBER DESCRIPTION

	SDH	X	(X)						
<b>PRODUCT SERIES:</b> Stelpro Duct Heater									
<b>MODEL:</b> FLANGE = F / INSERTION = I / ROUND = R									
<b>ELEMENTS:</b> OPEN COIL (standard) = leave empty / TUBULAR (optional) = T									
<b>DUCT DIMENSION:</b> 2 to 14 alphanumeric digits; Ex. #1: 16.5 x 19.25 (for a rectangular duct) - Ex. #2: 16.5 (for a round duct)									
<b>KILOWATTS:</b> 2 to 8 alphanumeric digits; Ex.: 12 K (for 12 kW)									
<b>VOLTS:</b> 4 alphanumeric digits; Ex.: 240 V									
<b>PHASE:</b> 2 alphanumeric digits; Ex.: 1 P or 3 P									
<b>AVAILABLE CONTROLS:</b> 1 alpha or numeric digit; Ex.: A for CIR048									
<b>AVAILABLE OPTIONS</b>									

# PRODUCT CAPACITY

PRODUCT CAPACITY ACCORDING TO AIR VOLUME AND TEMPERATURE RISE  
 Air temperature at the entrance of the duct heater should not exceed 27 °C (80 °F).

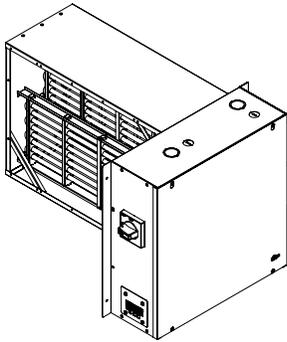

## USEFUL FORMULAS

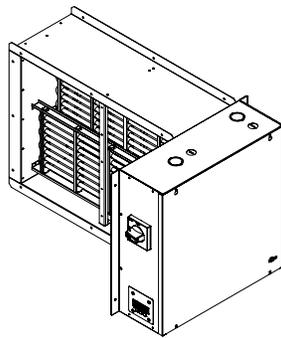

AIRFLOW	$D = V \times A$
	$D = \text{AIRFLOW CFM (M}^3\text{/S)}$
	$V = \text{VELOCITY FPM (M/S)}$
	$A = \text{AREA, SQ.FT. (M}^2\text{)}$
TRANSFER OF HEAT	$KW = (1.08 \times \Delta T (^{\circ}\text{F}) \times D (\text{CFM})) / 3412$
IMPERIAL	$Q (\text{BTU/H}) = 1.08 \times D (\text{CFM}) \times \Delta T (^{\circ}\text{F})$
METRIC	$Q (W) = 1.23 \times D (\text{L/S}) \times \Delta T (^{\circ}\text{C})$
AMPERAGE	1 PHASE : $L (\text{AMPERES}) = \text{WATTAGE (W)} / \text{VOLTAGE (V)}$
	3 PHASES : $L (\text{AMPERES}) = \text{WATTAGE (W)} / \text{VOLTAGE (V)} \times 1.73$
TEMPERATURE CONVERSION	$^{\circ}\text{F} = (^{\circ}\text{C} \times 1.8) + 32$
	$^{\circ}\text{C} = (^{\circ}\text{F} - 32) / 1.8$
	$\Delta T (^{\circ}\text{F}) = \Delta T (^{\circ}\text{C}) \times 1.8$
	$\Delta T (^{\circ}\text{C}) = \Delta T (^{\circ}\text{F}) / 1.8$
AIRFLOW CONVERSION	1 CFM = 0.47 L/S
	1 L/S = 2.12 CFM
	1 M <sup>3</sup> /S = 1000 L/S
POWER CONVERSION	1 KW = 3412 BTU/H
	1 BTU/H = 0.0002928 KW

## CONSTRUCTION AND STANDARD COMPONENTS

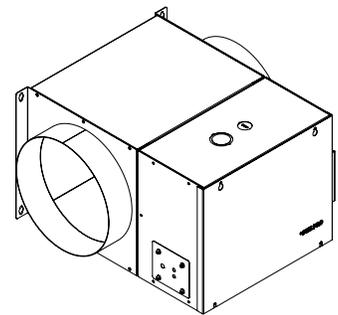

SDHI(T): INSERTION

SDHF(T): 1 IN. FLANGE

SDHR(T): ROUND COLLARS

- Cabinet and heating body made of G90 galvanized steel of appropriate gauge, based on UL requirements (minimum of 20 GA)
- “Zero-inch” clearance from flammable materials
- Horizontal, vertical, upflow or downflow installation

## WIRING

- SEW 125 °C (257 °F) internal wiring
- TEW 105 °C (221 °F) internal wiring

## THERMAL PROTECTION

- Automatic and manual thermal protection
- 100,000 cycles

## CONTROL TRANSFORMER

- 24 V secondary
- Class B insulation
- Class 2 40 VA and 96 VA (up to 480 V)

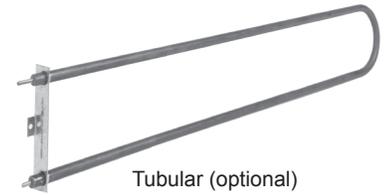

## ELEMENTS

- Open Nickel-Chrome alloy coil 60/40, with ceramic base
- Tubular (Incoloy 800)

Open coil (standard)

Tubular (optional)

## MAGNETIC CONTACTORS

- Total cut-off at all times

## STATIC RELAY (SCR)

- Static relay for power modulation

## HEATER DEACTIVATING INTERLOCK TERMINAL BLOCK

- The unit's elements can only be activated if contact is made between the two terminals. The customer can connect the desired protections between these terminals.

## ELECTRONIC CONTROLS TABLE

FEATURE	DESCRIPTION	TYPE OF CONTROL					
		TN	1ST	2ST	CIR-047	CIR-048	CIR-017/ CIR-011
		PRODUCT NUMBER CODE					
		E	1	2	B	A	C/D
CONTROL INPUT	BARE UNIT	•					
	24 V - 1 STAGE NON-MODULATING		•		•		
	24 V - 2 STAGE NON-MODULATING			•			
	24 V - PWM				•	•	
	0-10 V				•	•	•
	2-10 V (4-20MA)					•	
	24 V - 1 STAGE MODULATING (0-100% MODULATION WHEN USED WITH OPTIONAL TEMPERATURE SENSOR)					•	•
	24 V - 2 STAGE MODULATING (0-60-100%)						•
	24 V - 3 STAGE MODULATING (0-40-70-100%)						•
	SELF MODE					•	•
HEATING OUTPUT	SCR				•	•	•

CONTROL TRANSFORMER	CONTROL TRANSFORMER		•	•	•	•	•
FAN OUTPUT	FAN RELAY (OPTIONAL - OPTION R)		•	•			•
SUPPLY DUCT TEMPERATURE SENSOR	MEASURE THE AIR TEMPERATURE AT THE EXIT OF THE COIL (OPTIONAL - OPTION T)					•	•
ELECTRONIC AIR VELOCITY SENSOR	MEASURE THE AIR VELOCITY IN THE DUCT (OPTIONAL - OPTION P)				•	•	•
BUILT-IN TEMPERATURE LIMIT SENSOR	MEASURE THE AMBIENT AIR TEMPERATURE NEAR THE ELECTRIC COIL ELEMENTS (OPTIONAL - OPTION TT)				•	•	
AUTO DIAGNOSTIC	FAULT DISPLAY						•
USER INTERFACE	LEDS AND POTENTIOMETER					•	
	NUMERICAL DISPLAY AND BUTTONS						•
REMOTE CONTROL	DEPORTED PLENUM THERMOSTAT (OPTIONAL ACCESSORY)					•	

# CONTROLS

## **TN CONTROL (E)**

The duct heater is controlled by means of a terminal block.

Included: Terminal block connection, thermal protection with automatic reset, thermal protection with manual reset.

## **1ST CONTROL (1)**

The duct heater is controlled by means of a 24 Vac On/Off terminal block.

Included: 24 Vac control transformer, thermal protection with automatic reset, thermal protection with manual reset, relays or contactors.

## **2ST CONTROL (2)**

The duct heater is controlled by means of a 24 Vac terminal block with two control terminals. By default, the two control stages are of equal power.

Included: 24 Vac control transformer, thermal protection with automatic reset, thermal protection with manual reset, relays or contactors.

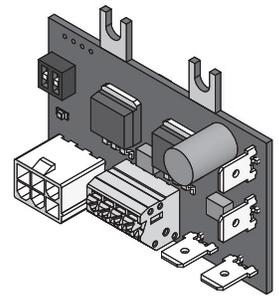

## **CIR047 CONTROL (B)**

The CIR-047 electronic control has been designed to receive the heating coil configuration of 1 stage power. This control allows a low tension connection with a 0-10 V, 24 Vac (pwm) or 24 Vdc control. The power will modulate from 0 to 100%. This electronic control has only one output to control the elements.

Included: 24 Vac control transformer, thermal protection with automatic reset, thermal protection with manual reset and SCR relays.

**P OPTION:** Electronic air velocity sensor. Airflow detection: 100 fpm minimum

**TT OPTION:** Built-in temperature limit sensor. Maximum air temperature: 50 °C (122 °F).

## **CIR048 CONTROL (A)**

The duct heater is controlled by means of a 0-10 Vdc, 2-10 Vdc (4-20 mA), 24 Vac (pwm) or 24 Vdc signal. The user interface is equipped with indicator lights and a potentiometer to adjust the setpoint. This electronic control has 3 outputs to control the elements.

Included: 24 Vac control transformer, thermal protection with automatic reset, thermal protection with manual reset, relays, contactors and SCR relays.

### **SELF MODE**

This control card allows a standalone operation when IN and R of terminal block are connected together with a jumper (not supplied by Stelpro) and dip switch is configured at 24 Vac (pwm). When this mode is in function, the elements are activated and modulated without external control to reach and maintain the set point temperature.

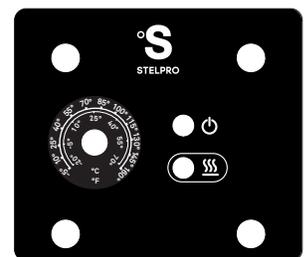

**T OPTION** (recommended): Supply duct temperature sensor. The temperature sensor allows you to limit the temperature in the duct to a defined value between -20 °C and 70 °C (-4 °F and 158 °F).

**P OPTION:** Electronic air velocity sensor. Airflow detection: 100 fpm minimum.

**TT OPTION:** Built-in temperature limit sensor. Maximum air temperature: 50 °C (122 °F).

### **COMPATIBLE ACCESSORY**

The CIR048 electronic control is compatible with the deported plenum thermostat D070.

## CIR011 (D) / CIR017 (C) CONTROL

The duct heater is controlled by means of 24 Vac (1 to 3 stages) or 0-10 Vdc, or will function autonomously, based on the mode selected. The user interface is equipped with a digital display and a setpoint adjustment button between -20 °C and 70 °C (-4 °F and 158 °F). The digital display indicates the state and function of the duct heater. The CIR011 control has 8 outputs and the CIR017 has 5 outputs to control the elements.

Included: 24 Vac control transformer, thermal protection with automatic reset, thermal protection with manual reset, relays, contactors and SCR relays.

**T OPTION** (recommended): Supply duct temperature sensor. The temperature sensor allows you to limit the temperature in the duct to a defined value.

**P OPTION:** Electronic air velocity sensor. Airflow detection: 100 fpm minimum.

### MODES

- W1 (1 stage – 24 Vac): Limits the setpoint temperature (to 0.5 °C [1 °F] of precision in the duct).
- W1-W2 (2 stages – 24 Vac): Limits the selected setpoint temperature (to 0.5 °C [1 °F] of precision in the duct). With a W1 signal, the unit will use at most 60% of its capacity. With a W2 signal, the unit will use 100% of its capacity.
- W1-W2-W3 (3 stages – 24 Vac): Limits the selected setpoint temperature (to 0.5 °C [1 °F] of precision in the duct). With a W1 signal, the unit will use at most 40% of its capacity. With a W2 signal, the unit will use at most 70% of its capacity. With a W3 signal, the unit will use at most 100% of its capacity.
- 0-10 V (0-10 Vdc signal): The unit adjusts the output power in proportion to the signal received (for example: 3.2 V = 32%). The digital display setpoint represents the temperature limit in the duct.
- SELF (self mode): Functions continuously in order to permanently limit the setpoint temperature in the duct.
- FAN “ON”: Output # 5 can be configured to be a fan outlet. It will operate when there is a demand for heating, and for a minute after the demand.

## OPTIONS TABLE

Each option is described in detail on the following pages.

OPTIONS	
OPTION	DESCRIPTION
D	TRANSFORMER NOT INCLUDED
E	REMOTE CONTROL BOX
F	VERTICAL INSTALLATION IN HORIZONTAL AIRFLOW
G	SAFETY MESH ON LEFT SIDE
H	SAFETY MESH ON RIGHT SIDE
I	MAIN BREAKERS
J	MAIN DISCONNECT SWITCH
K	MAIN LINE FUSES
L	LOAD FUSES
N	DIFFERENTIAL PRESSURE SWITCH
O	OEM
P	ELECTRONIC AIR VELOCITY SENSOR
R	FAN RELAY
S	HORIZONTAL INSTALLATION IN VERTICAL AIRFLOW
T	SUPPLY DUCT TEMPERATURE SENSOR

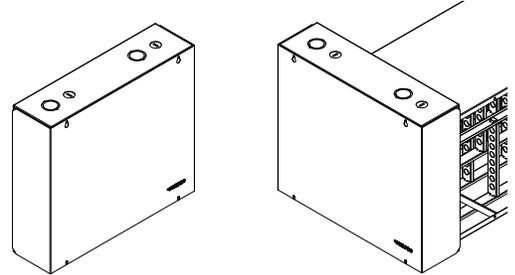

OPTIONS	
OPTION	DESCRIPTION
V	SCR RATED FOR DOUBLE REQUIRED AMPERAGE
W	PILOT LIGHT
X	80/20 NICR GRADE A ELEMENT
Y	UNBALANCED THREE STAGE SYSTEM
CC	CONTROL BOX WITH RIGHT EXTENSION
GG	PERFORATED 1/2 IN. (12,7 MM) DIFFUSER GRILL
HH	NEMA 4 OR NEMA 4X CONTROL BOX (NEMA 12 INCLUDED)
II	CONTROL BOX EQUAL TO THE DUCT HEIGHT
JJ	DISCONNECT SWITCH WITH DOOR INTERLOCK
KK	CONTROL FUSE
LL	SCR RELAY ON EACH CIRCUIT
PP	HINGED DOOR
SS	STAINLESS STEEL ELEMENT HOUSING
TT	BUILT-IN TEMPERATURE LIMIT SENSOR
-#	UNIQUE IDENTIFICATION MODEL

**OPTION D** TRANSFORMER not included

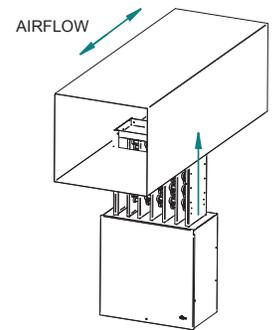

**OPTION E** REMOTE CONTROL BOX

The control box is detachable and independent of the heating body. The heating section, called the heating body, is equipped with a cabinet of minimum dimensions, with only the thermal protection and the elements inside. The power connection between the heating body and the control box is the customer's responsibility, and can be made using the terminals provided and labelled for that purpose.

**OPTION F** VERTICAL INSTALLATION IN HORIZONTAL AIRFLOW

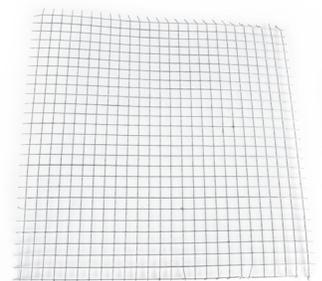

The heating body is inserted vertically into the duct. The control box can be fixed to the duct underside or on the top. By default the control box is fixed on the underside (as shown) unless otherwise specified.

**OPTION G** SAFETY MESH ON LEFT SIDE

**OPTION H** SAFETY MESH ON RIGHT SIDE

The mesh (1/4 in. [6,35 mm], 23 G) can be installed on the left or right side of the heating body (depending on the option chosen), facing the control box enclosure.

**OPTION I** MAIN BREAKERS

The unit's main supply is protected by one or more breakers. They protect at 125% of rated current. The unit is subdivided into circuits of at most 40 rated amps to protect them, in accordance with UL requirements. This option is not recommended for a unit exceeding 240 V.

**OPTION J** MAIN DISCONNECT SWITCH

The unit is equipped with a lockable main disconnect switch.

---

**OPTION K** MAIN LINE FUSES

These fuses are installed directly on the main supply. They are J type and HRC certified. They protect at 125% of the rated current.

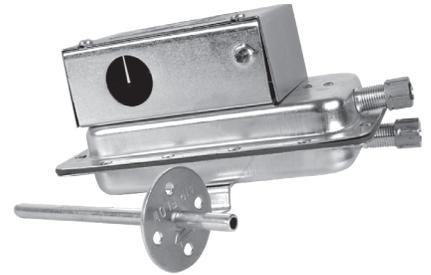

**OPTION L** LOAD FUSES

These fuses are installed on each of the power branches. They are J type and HRC certified. They protect each branch at 125% of the rated current. The unit is subdivided into branches of at most 48 rated amps, in accordance with UL requirements.

---

**OPTION N** DIFFERENTIAL PRESSURE SWITCH

The minimum operating limit for this switch is 0.05 in. (0,127 mm) W.C.  $\pm$  0.02 in. (0,051 mm) W.C.

---

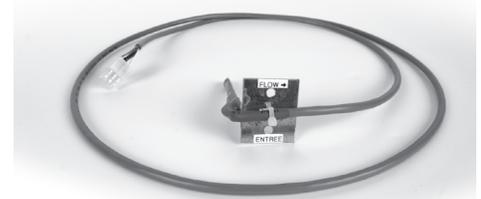

**OPTION O** O.E.M (Original Equipment Manufacturing)

---

**OPTION P** ELECTRONIC AIR VELOCITY SENSOR

This sensor, installed before the coil, measures air velocity. The coil elements do not heat if the air velocity is less than 100 fpm.

---

**OPTION R** FAN RELAY

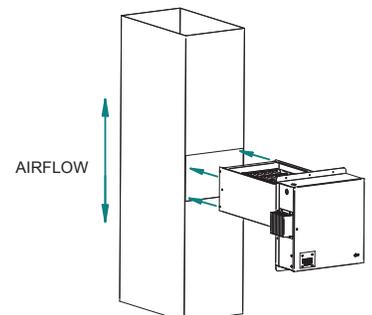

This is an NO-NC change-over relay controlled either by an electronic card when present or by the first power circuit. This relay, by means of a terminal block, can be used to control another product, like a ventilation motor.

---

**OPTION S** HORIZONTAL INSTALLATION IN VERTICAL AIRFLOW

The duct is vertical and the unit is inserted through one of the faces as shown. The control box is off center downward unless otherwise specified.

---

**OPTION T** SUPPLY DUCT TEMPERATURE SENSOR

This sensor, installed in the duct after the coil, is coupled with an electronic control system, allowing the heating body power to be modulated so as to precisely reach and maintain the setpoint temperature. Depending on the control used (see the Controls section), the setpoint temperature can be adjusted from -20 °C to 70 °C (-4 °F to 158 °F).

---

**OPTION V** SCR AT DOUBLE THE REQUIRED AMPERAGE

This option is used when the SCR must support double the nominally required amperage.

---

**OPTION W** INDICATOR LIGHT

This option is used when a visual signal is required to detect the triggering of the unit's thermal protection.

---

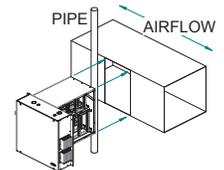

**OPTION Y** UNBALANCED THREE PHASE SYSTEM

This option is recommended when the unit is connected to a 3-phase 600 V current and is 1 kW and under. The unit is designed to unbalance the phases.

---

**OPTION CC** CONTROL BOX WITH RIGHT EXTENSION

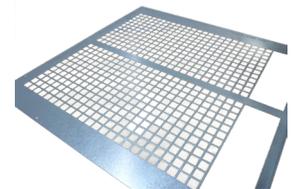

This option is used when space is restricted to the left of the control box.

---

**OPTION GG** 1/2" PERFORATED GRILL

This grill is used upstream of the unit to diffuse air uniformly over the unit's heating elements.

---

**OPTION HH** 4 OR 4X NEMA CONTROL BOX

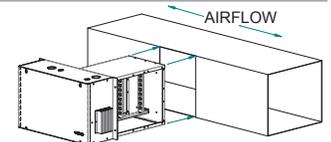

This option is used when installation occurs outdoors and when greater humidity and dust protection is required.

---

**OPTION II** CONTROL BOX EQUAL TO THE DUCT HEIGHT

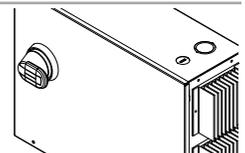

This option is used when space is restricted at the top and the bottom of the ventilation duct.

---

**OPTION JJ** DISCONNECTOR WITH DOOR INTERLOCK

This option is used to keep the box from opening when the unit is powered. Hinged door included (PP option).

---

**OPTION KK** CONTROL FUSE

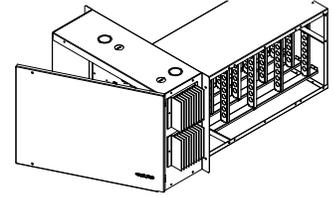

Control fuse, for protection against overcurrent, on the secondary of the 24 V class B transformer.

**OPTION LL** SCR RELAY ON EACH CIRCUIT

This option is used to maintain a greater level of heating precision. Also, the use of a SCR relay generates less noise than a standard relay.

**OPTION PP** HINGED DOOR

This option is used to hold the open door on the unit thus making maintenance call faster and easier. The hinge's design still allows the door to be removed if necessary. Note: Door opens from the left by default (hinge on the right side)

**OPTION TT** INTEGRATED ELECTRONIC AIR SENSOR

This sensor, built into the heating body, is comprised of a thermistor coupled with an electronic card that limits coil element overheating caused by a decrease in ventilation by modulating their heating time when the maximum ambient temperature near the elements has been reached. The maximum temperature is 50 °C (122 °F).

**OPTION SS** STAINLESS STEEL ELEMENT HOUSING

This option is used for a more humid environment.

Note: For all values that do not appear in this table, you may calculate them using the following formula:  
 WATTS = (flow in CFM) X (TEMP. delta °F) / 3.1

## STATIC PRESSURE LOSS

---

## MINIMUM AIRFLOW REQUIRED

---
